KINSHOFER
GROUP COMPANY

**22 companies,
10 brands,
more than 4.000 products**

The Kinshofer Group is one of the world's leading designers and manufacturers of attachments for construction machinery, such as excavator, backhoe loader, skidsteer loaders, knuckle boom cranes and forklift trucks. The Kinshofer Group is a One-Stop-Attachment-Shop to our customers around the globe.

Day in and day out, all year 'round, people's decisions and needs create demand for transport and infrastructure solutions. Without the type of product and services the Kinshofer Group provides, the societies, where many of us live, would not function.

Find a wide range of attachments for loader cranes here and even more on our website kinshofer.com

KINSHOFER manufactures rotators for truck loaders, excavators and logging operations. Years of experience in designing rotators and hydraulic load handling equipment guarantee high efficiency, long lasting rotators, specially tailored to meet your requirements.

The gear-type design ensures a very compact and powerful rotator. The precision control and braking ability is especially appreciated by operators. A grapple does not rotate unexpectedly when digging, even under maximum load, and there is no need for stability compensation when handling longer lengths of timber...

These are only some of the many working situations where operators appreciate the advantages of using **KINSHOFER**-rotators.

KINSHOFER-Rotators are the solution.

KM 501 - Upper suspension between rotator and crane

An upper suspension is a cardan link between rotator and crane. It is available for all current makes and models of cranes. Please specify dimensions when ordering.

Type	Load capacity (kg)	Self weight (approx. kg)
KM 501 (3000)	up to 3000	5
KM 501 (4500)	up to 4500	10
KM 501 (6000)	up to 6000	15
KM 501 (10,000)	up to 10000	25

**KM 511 - Upper suspension with pendulum damper between rotator and crane**

A pendulum damper reduces the horizontal swing of the attachment. It can also be retrofitted to an existing upper suspension.

Type	Load capacity (kg)	Self weight (approx. kg)
KM 511 (4500)	up to 4500	15
KM 511 (6000)	up to 6000	20
KM 511 (10,000)	up to 10000	30

**KM 206 - Hose guard**

The hose guard is a metal bow to be attached onto the rotator. It is designed to protect the hoses of the rotator from damage i.e. from protruding branches.

Type	Description	Self weight (approx. kg)
KM 206	hose guard for the rotator	3

**KM 502 - Reduction link between rotator and grapple**

A reduction link adapts a shaft type rotator to an attachment with a standard hole pattern for a flange (KM 502).

Type	Load capacity (kg)	Self weight (approx. kg)
KM 502 (3000)	up to 3000	2
KM 502 (4500)	up to 4500	3
KM 502 (6000)	up to 6000	4

KM 505 - Quick change system for shaft-type rotators up to 4000 kg load capacity

The quick change system enables an easy exchange between different attachments. The mechanical coupling and locking is achieved by the turning motion of the rotator. You simply disconnect the quick couplings and disengage the locking device manually. The upper element of the quick change system is available for all KM 04 - shaft rotators. The KM 505 system allows the easy exchange between pallet fork and brick stack grapple for example. Not suitable for heavy duty work.

KM 505 HD - Heavy duty quick change system for shaft-type rotators

The quick change system enables an easy exchange between different attachments. The mechanical coupling and locking is achieved by the turning motion of the rotator. You simply disconnect the quick couplings and disengage the locking device manually. The upper element of the heavy duty quick change system is available for the KINSHOFER shaft rotators KM 04 S68-30US or KM 06 S68-40. The KM 505 system allows the easy exchange between pallet fork and clamshell bucket for example. Especially developed for the heavy duty task with clamshell buckets.

KM 507 HD - Heavy duty quick change system for Z-cranes and flange-type rotators

The KM 507HD has been developed especially for heavy duty tasks with Z-cranes in combination with timber grabs, orange peel grabs and clamshell buckets.

The quick change device provides for an economic exchange between different attachments. The mechanical coupling and locking is achieved by the crane movement. As soon as the quick change device upper part has been positioned in the lower part, the system is closed automatically.

To unlock, the operator only has to open the locking device of the quick change system with the opening lever and then lift the crane to leave the lower part.

The upper part of the quick change device KM 507 HD has been designed for flange rotators with hole patterns 4 x 140 or 6 x 173 and can be mounted easily.

The exchange between a timber grab and a clamshell bucket, for example, can be realized fast and easy.

- **Axial load capacity max. 10,000 kg** – also suitable for 10t-rotators.
- Extremely **light and flat** construction.
- Additional **protection against unintended unlocking** thanks to automatic safety locking.
- **Easily retrofittable system** to existing components because it is purely mechanical.
- **No preparation required on the crane.**

The technically unique KM 332 brick stack grapple is a versatile tool for palletized and non-palletized materials.

- ▷ **Rigid or adjustable plunge depth** of parallel opening and closing clamping arms - hydraulically operated.
- ▷ **Versatile tool** with opening range of 400 mm to 1400 mm i.e. for handling of single concrete products like curbstones, or handling of brick packs.
- ▷ **Handling of heavy loads** with reinforced version **KM 333**.
- ▷ **Adjustable plunge depth** of **KM 332V** and **KM 333V** can match the size of the stack-easy adaption with a mechanical latch.
- ▷ **Precise synchronisation of the arms** as a result of two in series double acting hydraulic cylinders.
- ▷ **Safety** through internal pressure relief valve (independent from crane pressure) and non-return valve (safe clamping force at pressure drop).
- ▷ **Long life** due to generously dimensioned bearings, integrated grease reservoir, automatic wear compensation of main bearing, spherical central bearing for the cylinders.
- ▷ **Easy to use** with durable and replaceable rubber inserts - simple to operate between the stacks.

The robust brick stack grapple KM 331 handles loads up to 2000 kg.

- ▷ **Fixed plunge depth** with pivot clamping arms - hydraulically operated.
- ▷ **Versatile tool** with opening range of 40 mm to 1500 mm i.e. for handling of single concrete products like curbstones, or handling of palletized brick packs.
- ▷ **Synchronised function of clamping arms** due to sturdy gear-toothed quadrants.
- ▷ **Safety** through internal pressure relief valve (independent from crane pressure) and holding valve (safe clamping force at pressure drop).
- ▷ **Reduced overall height** in comparison to the plunge depth due to lower rotator position.
- ▷ **Compression rails** with durable and replaceable rubber inserts.

The efficient pallet fork KM 401 with a spring loaded centre of gravity can easily be adapted to different loads with adjustable plunge depth and adjustable tine spread.

- **Efficient handling** of many different kinds of loads like stone or brickstack, protection trellis or other general cargo is possible due to the easy adjustment with a stainless steel-plastic-sliding guide in the upper part.
- **Versatile height** from 1050 mm to 1650 mm adjustable in three steps with a lock pin.
- **Versatile width** of tines from 475 mm to max. 835 mm adjustable with a smooth running, stainless spindle.
- **Easy to use** due to the dimensions of the pallet fork. Since no part of the pallet fork is wider than a standard pallet, a second row can be loaded and loads close to walls can also be handled without problems.

KM 460 protection trellis

The protection trellis is used to secure loose loads handled with pallet forks KM 415 and KM414 – e.g. brick packages, loose construction materials. When handling loose material, a protection trellis or net to secure the load, is obligatory (EN 13155). The maximum capacity is 2000 kg. The protection trellis can be mounted within a few minutes and is thus suitable for each construction site without any problems.

The robust pallet fork KM 415 with spring loaded centre of gravity compensation can easily be adapted to different loads with adjustable plunge depth and adjustable tine spread.

- **Efficient handling** of many different kinds of loads in an economic, one-man operation is possible due to the automatic shifting of the KM 415 to a preset position. Compression springs return slide to initial position.
- **Throat height adjustable in steps** from 1050 mm to 1650 mm with a lock pin.
- **Tine spread adjustable in steps** from 345 mm to max. 975 mm with a lock pin.

KM 502 (4500)	reduction link between rotator and grapple
KM 460 04 (KM 04 S)	non-rotating hook for rotator KM 04 S

Technical drawings

Thanks to the universal extensions for the pallet forks KM 401 (H), KM 414 and KM 415, the throat height of each of these types can be extended by 750 mm or 1200 mm respectively.

- **Fast mounting** due to easy positioning of the extension by lock pin between upper and lower part of the respective pallet fork.
- **Throat height adjustable in steps** with a lock pin. The general throat height can be extended by the extension but also removed easily.
- **Adjustable tine spread** and all other functions of the pallet forks remain untouched.
- **Ideally adjusted** to the respective load capacity/centre of gravity of the pallet fork.
- **Two lengths available:** 750 mm or 1200 mm.

The universal fork KM 461 for loader cranes handles wallboards and other lying building materials up to a size of 1250 height and 460 mm depth.

- **Different tine spreads** depending on the sheets that have to be handled.
- **Safe transport** of sheets of wallboard in the hinged lower section. The boards can be lifted and folded into a vertical position and clamped between the tines and frame, preventing them from sliding during handling.
- **Protection of the sheets** during unloading through semi-tapered forged tines, equipped with rollers and pads. A standard centre slide gives an additional support point for your loads.
- **Security** is assured even in case of a drop in pressure due to the integrated counterbalance valve that prevents the fork from opening unintentionally. The hydraulic cylinder is equipped with a pressure relief valve to prevent overload.
- **Accurate positioning** of the load is ensured by the tilt cylinder and the rotator.
- **The special version of the universal fork, the KM 461A** with a second suspension point on the main beam enables the unloading of lying boards through narrow openings in the wall.
- **Optional piston rod protection** for versions with 1500kg and 2000kg load capacity, also retrofittable.

HPXdrive

The hydraulic drive unit **HPXdrive**, characterized by its constant closing force, is optimally suited for daily operations in general construction, civil engineering and landscaping.

In contrast to conventional hydraulic grabs, with the **HPXdrive** the torque is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. The force is delivered to two shafts, on which the shells are mounted.

These advantages of the **HPXdrive** - technology provide an extended service life and higher efficiency.

The compact design of the **HPXdrive** without open greasing points allows for operations in water protection areas, as no lubricant can be washed out.

The **HPXdrive Standard** as an allround unit is perfect for the daily routine jobs. The advantages of the **HPXdrive**-technology like the constant high closing force and the compact design, guarantee a long life and reliability.

The standard rotator of the **HPXdrive Standard** is the **KINSHOFER** rotator with flange KM 04 F140-30V. In case a quick change to a non-rotating hook is necessary, the **HPXdrive** can be delivered with the **KINSHOFER** shaft rotator KM 04 S in combination with either the quick change system KM 505 or the reduction link KM 502.

Technical information **HPXdrive Standard**:

Torque (at 26 MPa):	12000 Nm
Operating pressure at oil flow:	26 MPa (260 bar) at max. 75 l/min 26 - 37 MPa (260 - 370 bar) at max. 40 l/min

HPXdrive Standard with flange rotator HPX-SD-04F-30V

Package consists of: upper suspension KM 501 (4500), rotator KM 04 F140-30V, drive unit **HPXdrive Standard** with pressure relief valve and non-return valve

Self weight: 160 kg

Height: 480 mm

HPXdrive Standard/502 with shaft rotator and reduction link HPX-SD-502

Package consists of: upper suspension KM 501 (4500), rotator KM 04 S, reduction link KM 502 (4500), short connecting hoses KM 203 01, drive unit **HPXdrive Standard** with pressure relief valve and non-return valve

Self weight: 165 kg

Height: 535 mm

HPXdrive Standard/505 with shaft rotator and quick change system HPX-SD-505

Package consists of: upper suspension KM 501 (4500), rotator KM 04 S, quick exchange system KM 505, connecting hoses KM 203 01, drive unit **HPXdrive Standard** with pressure relief valve and non-return valve

Self weight: 170 kg

Height: 575 mm

Note: for heavy duty tasks we recommend the quick change system KM 505 HD in combination with KM 04 S68-30US

The drive unit **HPXdrive Standard** can only be used in combination with **KINSHOFER** rotator and shells.

The bucket shells of the **HPXdrive Standard** are bolted to the shafts, and therefore it is very easy to replace them with another set of shells. Different types of shells for different applications can be refitted onto the driving unit, e.g. clamshell bucket, rock grapple, timber grapple, hay and forestry grapple and multi purpose clamshell. Other types of shells are available on request.

The interchangeable shells are delivered with an exchange aid that guarantees the **HPXdrive Standard** can be positioned with ease.

Package consists of: exchangeable shells, bolt-on teeth (for KM 604HPX, KM 626HPX), exchange aid kit

The drive unit **HPXdrive Standard** can only be used in combination with **KINSHOFER** rotator and shells.

An allround clamshell bucket using the *HPXdrive Standard* for digging and handling, the KM 604HPX is ideal for the daily routine work. The revolutionary *HPXdrive*-technology guarantees a reliable and low maintenance attachment.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** by different types of shells that can easily be refitted onto the unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Precise handling** with the gear-type KINSHOFER rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- **Rotator with shaft** is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- **Constant closing force** (19 kN at 26 MPa operating pressure) over the entire opening and closing process.

The KM 613HPX with *HPXdrive Standard* for positioning and handling natural stones, curbstones etc. is an ideal tool for landscaping architecture. A non-return valve secures constant pressure even in case of unexpected pressure drop. The revolutionary *HPXdrive*-technology guarantees a reliable and low maintenance attachment.

- ▷ **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- ▷ **Longer life cycle** up to 50%! **Self-lubrication:** The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- ▷ **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- ▷ **Profitability** through low maintenance costs and longer life cycle.
- ▷ **Precise handling** with the gear-type KINSHOFER rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.
- ▷ **Rotator with shaft** is available as an alternative, in case a quick change to a non-rotating hook is favoured.
- ▷ **Constant closing force** (18 kN at 26 MPa operating pressure) over the entire opening and closing process.

Package rock grapple KM 613HPX with **KINSHOFER** flange rotator

Type	Capacity (m ²)	Width E (mm)	Height (mm)	max. Opening (mm)	Self weight (kg)	Closing force (kN)	Load capacity (kg)
KM 613HPX-0.16 c	0,16	400	1000	1200	235	18	1000

Package consists of: rock grapple, rotator KM 04 F140-30V, upper suspension KM 501 (4500), pressure relief valve, non-return valve

HPX-KM 505 add also available with a shaft rotator and quick change system KM 505

HPX-KM 505 HD add for heavy duty tasks we recommend the quick change system KM 505 HD in combination with the KINSHOFER rotator KM 04 S68-30US

The **HPXdrive Heavy Duty** is a powerful version for difficult tasks. The advantages of the **HPXdrive**-technology - the constant high closing force and the compact design - guarantee a long life and reliability.

The standard rotator of the **HPXdrive Heavy Duty** is the **KINSHOFER** rotator with flange KM 04 F140-30V. In case a quick change to a non-rotating hook is necessary, the **HPXdrive** can be delivered with the **KINSHOFER** shaft rotator KM 04 S in combination with the quick change system KM 505 or the reduction link KM 502.

Technical information HPXdrive Heavy Duty:

Torque (at 32 MPa): 21000 Nm

Operating pressure at oil flow: max. 32 MPa (320 bar) at 40 - max. 90 l/min
Mind the pressure!

HPXdrive Heavy Duty with flange rotator HPX-HD-04F-30V

Package consists of: upper suspension KM 501 (4500), rotator KM 04 F140-30V, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 195 kg

Height: 510 mm

HPXdrive Heavy Duty/502 with shaft rotator and reduction link HPX-HD-502

Package consists of: upper suspension KM 501 (4500), rotator KM 04 S, reduction link KM 502 (4500), short connecting hoses KM 203 01, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 200 kg

Height: 565 mm

HPXdrive Heavy Duty/505 with shaft rotator and quick change system HPX-HD-505

Package consists of: upper suspension KM 501 (4500), rotator KM 04 S, quick change system KM 505, short connecting hoses KM 203 01, drive unit **HPXdrive Heavy Duty** with non-return valve

Self weight: 205 kg

Height: 605 mm

Note: for heavy duty tasks we recommend the quick change system KM 505 HD in combination with KM 04 S68-30US

The drive unit **HPXdrive Heavy Duty** can only be used in combination with **KINSHOFER** rotator and shells.

The bucket shells of the **HPXdrive Heavy Duty** are bolted to the shafts, and therefore it is very easy to replace them with another set of shells. Different types of shells for different applications can be refitted onto the driving unit, e.g. clamshell bucket, rock grapple, timber grapple, hay and forestry grapple. Other types of shells are available on request.

The interchangeable shells are delivered with an exchange aid that guarantees the **HPXdrive Heavy Duty** can be positioned with ease.

Package consists of: exchangeable shells, bolt-on teeth (for KM 605HPX), exchange aid kit

The KM 605 HPX-Z universal grapple with integrated flap rests flat and safe against the crane arm in its transport position. The special flap at the shell carrier allows to transport a large universal grapple, whereat the grapple does not protrude the carrier machine's width (2,55 m)* – without any loss in loading volume. The flap is secured automatically by a robust pressure piece with rubber bump.

- **Reliability** of the *HPXdrive*. The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!

Type	Description
KM 685 05	adapters for compression rails (load capacity max. 250 kg, without compression rails)
KM 381 09 (720)	compression rails – length 720 mm (2 pieces)
KM 381 09 (1000)	compression rails – length 1000 mm (2 pieces)
KM 685 09 C	side plates to screw onto the grapple for easy digging tasks (4 pieces)
KM 204 01	mobile part of hydraulic quick coupling for hose (Ø 10 mm, 2 pieces)
KM 204 03	hydraulic quick change kit incl. mobile and fixed parts (2 pc. each) mounted to rotator

Requirements of truck crane

Operating pressure at oil flow:
max. 32 MPa (320 bar) at 40 - max. 90 l/min
Mind the pressure!

Technical drawings

The KM 605U HPX-Z universal grapple with integrated flap rests flat and safe against the crane arm in its transport position. The special flap at the shell carrier allows to transport a large universal grapple, whereat the grapple does not protrude the carrier machine's width (2,55 m)*, without any loss in loading volume. The flap is secured automatically by a robust pressure piece with rubber bump.

* depending on crane kinematics and mounting

- **Reliability** of the *HPXdrive*. The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinders!
- **Longer life cycle** up to 50%! **Self-lubrication**: The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Profitability** through low maintenance costs and longer life cycle.
- **Versatility** by different types of shells that can easily be refitted onto the driving unit.
- **Constant closing force** (28 kN at 32 MPa operating pressure) over the entire opening and closing process; high efficiency provided by hydro static bearings of the axes.
- **Precise handling** with the gear-type KINSHOFER rotator and shells synchronised by the single piston turning both shafts of the *HPXdrive*.

Technical drawings

The KM 626 is the ideal solution for light weight loader cranes in daily routine work – robust, effective, budget priced.

- **Maximum loading height** is achieved through the compact design with the horizontal double-cylinder.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Good digging behaviour** through the closely positioned shell pivots.
- **Excellent digging characteristics** are a result of high closing forces (27 kN at 26 MPa operating pressure).
- **Long life** is ensured through the use of 500 HB steel in the manufacture of the cutting edges.
- **Reduced wear out** due to a generously dimensioned bearing system; service-friendly design.

Technical drawings

The KM 605U is a robust clamshell bucket and versatile tool for handling all kinds of refuse material. The open sides of the grapple enables the grab of bulk material.

- **Compact design** with a horizontal hydraulic cylinder achieves a maximum loading height.
- **Long life** due to the use of 500 HB steel in the manufacture of the cutting edges and a generously dimensioned bearing system.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Safety** is assured in the event of an unexpected pressure drop due to the integrated non-return valve.
- **Wear plates** (reversible) and **welded hooks** are delivered on each grapple.
- **Powerfull operation** due to high closing force (28 kN at an operating pressure of 26 MPa).

Requirements of truck crane

Operating pressure at oil flow:

26 - 32 MPa (260 - 320 bar) at 40 - max. 75 l/min

Technical drawings

The KM 605U-Z universal grapple for Z-cranes rests flat and safe against the crane arm in its transport position. The special gap at the shell carrier allows to transport a large universal grapple, whereat the grapple does not protrude the carrier machine's width (2,55 m)* – without any loss in loading volume.

- **Maximum loading height** is achieved through the compact design with horizontal hydraulic cylinders.
- **Long life is ensured** through the use of 500 HB steel in the manufacture of the cutting edges and a generously dimensioned bearing system.
- **Synchronized opening and closing** through sturdy compensation bar.
- **Safety** is assured in the event of an unexpected pressure drop due to the integrated non-return valve.
- **Wear plates** (reversible) and **welded hooks** are delivered on each grapple.
- **Powerfull operation** due to high closing force (29 kN at an operating pressure of 26 MPa).

Technical drawings

The high volume clamshell bucket KM 622 has a significant narrow frame and can therefore fulfill small digging tasks besides the handling.

- **Suitable for digging** due to the narrow frame.
- **Compact design** due to the narrow frame enables manual filling of the bucket without obstacles.
- **Practically no „left overs“** of the material to be picked up as the working edges are vertical when the buckets are open and allow a deep plunge into a pile of material.
- **High stability** through reinforced buckets, torsion-free frame, generously dimensioned bearing system and the use of 500 HB steel in the manufacture of cutting edges.
- **Combination of compensator mechanism and cylinder guard** has many advantages: parallel action, longer life for piston rod and seals, significant weight savings.
- **Efficient handling** with high closing forces (20 kN at 26 MPa operating pressure).

Technical drawings

A robust clamshell bucket for handling loose material as sand, gravel, soil - perfectly matched to heavy duty work on vehicle mounted cranes.

- **Excellent filling characteristics** of the rugged grapple due to the special shape of the buckets and the wide separation between their axes that enables wide opening.
- **Practically no "left overs"** of the material to be picked up as the working edges are vertical when the buckets are open and allow a deep plunge into a pile of material.
- **High stability** through reinforced buckets, torsion-free frame, generously dimensioned bearing system and the use of 500 HB steel in the manufacture of cutting edges.
- **Combination of compensator mechanism and cylinder guard** has many advantages: parallel action, longer life for piston rod and seals, significant weight savings.
- **Efficient handling** with high closing forces (28 kN at an operating pressure of 26 MPa).

Technical drawings

The KM 603 is a proven grapple for daily routine work – ideal for excavating foundations, trenches and other similar applications in civil engineering. The closely positioned shell pivots ensure good digging behaviour and high closing pressure.

- **Good digging behaviour** through the closely positioned shell pivots.
- **Longevity** is ensured through the use of 500 HB steel in the manufacture of cutting edges and the generously dimensioned bearing system. The enclosed hydraulic cylinder (in a hub unit) and short hydraulic connection hoses lower the risk of damage and down-time.
- **Maximum loading height** is achieved through the compact design.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Excellent digging characteristics** are the result of high closing forces (20 kN at an operating pressure of 26 MPa).

The KM 603F is a special clamshell bucket with vertical cylinder for the daily routine work and has been constructed especially for the excavation of foundations and graves and includes a scraper.

- **Good digging behaviour** through the closely positioned shell pivots.
- **Longevity** is ensured through the use of 500 HB steel in the manufacture of cutting edges and the generously dimensioned bearing system. The enclosed hydraulic cylinder (in a hub unit) and short hydraulic connection hoses lower the risk of damage and down-time.

The powerful clamshell bucket KM 607 with two vertical hydraulic cylinders is ideal for heavy digging work in grown soil.

- **Good digging behaviour** due to good plunge behaviour and proven shell geometry.
- **Long life** is ensured through the use of 500 HB steel in the manufacture of cutting edges and the generously dimensioned bearing system. Piston rod protection for the vertical hydraulic cylinders are standard.
- **Synchronised bucket movements** due to sturdy compensation rods.
- **Bolt-on digging teeth** are delivered with each clamshell bucket.
- **Excellent digging characteristics** are the result of high closing forces (32 kN at an operating pressure of 26 MPa).

Type	Description
KM 685 08 HPX-450	HPXdrive extension for excavating e.g. trenches (for canal and civil engineering) – 450 mm (30 kg)

The device is simply attached to the bottom of the shells and you can grip concrete parts, curbs, etc. precisely, safely and without damage. The 4-Grip is simply plugged onto the grab shells and secured with a folding pin. The gripper teeth must not be removed, which significantly reduces assembly time.

Thanks to its special kinematics you can grab items not only when closing the shells but also when opening. Shaft rings can be loaded and unloaded fast and easy without damaging them!

- ▷ **Economic solution**, as it is only an accessory that increases the flexibility of your attachment.
- ▷ **Robuste design**.
- ▷ **Plastic compression rolls** avoid damage of the material to be gripped.
- ▷ **Fast and easy mounting and removal** on site.
- ▷ **Low additional weight**: only 28 kg in total.
- ▷ **High load capacity of 900 kg**.

Precise gripping of very narrow objects

Careful gripping of plain, slippery surfaces

Safe inside gripping without retooling

The small orange peel grapple KM 652-5 small for the handling of bulky scrap is available with five tines and three different volumes (120l, 180l, 240l).

- The KM 652-5 small is available with 5 half closing tines for handling swarf, scrap, rubbish, waste paper etc.
- **Long life** due to a solid design: the hydraulic cylinder pistons are protected by the gripping arms and the hydraulic hoses, connections and oil distributor are positioned in the robust centre section. Special wear resistant materials used in the production of the gripping arms and oversized bearings ensure a long service life for these sturdy grapples.
- **A lifting-eye** on the centre section acts as an additional stop.
- **Powerful operation** with high closing force (11 kN to 13 kN at an operating pressure of 26 MPa).

Large orange peel grapple for the handling of bulky scrap, the KM 650 large for various applications is available with different tine shapes, different volumes (250l, 350l, 500l), with 4 or 5 tines.

▷ **Different tine shapes** of the KM 650 series to accomodate handling a variety of materials:

- **KM 651:** fully closing tines for handling swarf, loose waste, soil, gravel etc.
- **KM 652:** half closing tines for handling swarf, scrap, rubbish, waste paper etc.
- **KM 653:** pointed tines for bulky scrap, car bodies, bundled waste paper etc.

▷ **Number of tines** can be chosen with 4 or 5 tines.

▷ **Long life** due to a solid design: the hydraulic cylinder pistons are protected by the gripping arms and the hydraulic hoses, connections and oil distributor are positioned in the robust centre section. Technical drawings

The reliable asymmetric orange peel grapple KM 652/2 with half closing tines provides for an easy transport, resting flat against the crane arm and not protruding the width of the carrier machine. It is mainly used for handling scrap, waste and construction materials, and is available with five (KM 652-5/2) or six tines (KM 652-6/2) – depending on the task.

- ▷ **Asymmetric construction:** the grapple rests flat against the crane arm in its position (see below drawing).
- ▷ **Special slot on the main carrier** allows the transport of a big orange peel grapple, that does not protrude the width of the carrier (2,5 m).
- ▷ **Half closing tines** by default, completely closing at the points, for handling waste, scrap, loose materials, etc.
- ▷ **Non-return valve** guarantees a secure retention of loads even when pressure drops.
- ▷ **Long service life** due to robust design – oil distributor and hydraulic hoses are protected in the center part, generously dimensioned bearings, wear-resistant shells made of 400 HB steel, cylinder with piston rod protection, stops for both end positions of tines.
- ▷ **Strong operation** due to high closing forces (13 kN at 26 MPa operating pressure).

The pipe grapple KM 930P is the ideal tool to grip, lift, handle and position poles, pipes and tubes with a telehandler.

- **360° endless rotation.**
- **High load capacities** from 1000 kg up to 3000 kg can be positioned easily with the pipe grapple.
- **Precise positioning** due to an integrated rotation with two motors and two holding brakes (KM 930-3000P equipped with four motors).
- **Secure retention of loads** thanks to an integrated non-return valve and clamping pads at the tine tips.

The harvester KM 634-3Z has been developed especially for telescopic forklifts. During the sawing process, the three robust tines of the integrated grab hold the log firmly and securely. Available in two sizes.

- **Three interlocking, robust tines** made of Hardox 400 steel.
- **Automatic re-stress** of the grab during the sawing process. The re-stress can be stopped by a lever to cut e.g. single branches separately.
- **Optimum grab design** allows to clamp even very thin logs.
- Saw equipped with **automatic chain pretension and greasing**.
- Precise positioning thanks to the **KINSHOFER-rotation with worm drive**.
- **High torque**.
- **Highly safe hydraulics** due to an integrated non-return valve, so the load is held safely even in the case of pressure drops.
- **8/3 solenoid valve** included to operate the grab with only one control circuit.

KM 634-0.35-3Z

The KM 634 is a robust and powerful tool for logs – especially for heavy duty operation. Well suited for handling single trunks.

- **Low height** with one horizontal hydraulic cylinder – especially when closed due to the interlocking arms.
- **Long service life** is ensured by the sturdy construction, high quality components and generously dimensioned bearing system. All bearing bolts are case hardened and housed in steel bearing bushes.
- **Optimised design** allows extremely small grapple diameter – ideal for handling thin timber securely. The arms open almost vertically. That enables an easy penetration into the timber stack.
- **Synchronisation** of arms due to sturdy compensation rods.
- **Protection of the hoses** for the hydraulic connections by a hose guard on the KINSHOFER rotator.
- **Precise positioning** of the loads is no problem in combination with the KINSHOFER rotator – continuous rotation, precise start and stop ability.
- **Safety** is assured in the event of an unexpected pressure drop due to the integrated non-return valve.
- **Reinforced version KM 634S** with more sturdy construction and equipped with a stronger rotator.

The rail grapple KM 632HPX Rail with its *HPXdrive* is used for the loading and unloading of rails, but also, with care, handle single sleepers. A non-return valve secures constant pressure even in case of unexpected pressure drop. The revolutionary *HPXdrive*-technology guarantees a reliable and low maintenance attachment. The grapple is ideal for mobile loader cranes as well as for rigidly mounted loader cranes on maintenance trailers.

- **Reliability** of the *HPXdrive*! The movement of the arms of the grapple is generated by two hollow shafts, which run opposed and have a helix thread, hydraulically driven by a single piston. No more hydraulic cylinder.
- **Longer life cycle** up to 50%! **Self-lubrication:** The drive unit runs in a permanent oil bath. The compact design makes the *HPXdrive* resistant to dirt and debris.
- **Versatility** with different types of shells that can easily be refitted onto the driving unit.
- **Profitability** through low maintenance costs and longer life cycle.
- **Rotator with shaft** KM 04 S is available as an alternative, in case a quick change KM 505 (or a reduction link KM 502 or e.g. for a non-rotating hook) is required.
- **Constant closing force** (34 kN at 26 MPa operating pressure) during the entire opening and closing process.

Designed to handle the various demands of the rail, the Universal Railroad Grapple with horizontal cylinders KM 632-2-R can be used for rail or ties.

- The Universal Railroad Grapple is **ideal for handling used sleepers and rails – and even for clearing brush.**
- **Long service life** is ensured by the sturdy construction and high quality components.
- **Reduced wear** resulting from generously dimensioned bearing system.
- **Tine tips are vertical when the grapple is fully opened**, allowing easy loading and unloading of bundled ties - directly from gondola cars.
- **Gears are standard** and ensure synchronized movement of tines.
- **The tool is equipped with two horizontal hydraulic cylinders**, providing an extremely high clamping force.
- The **gear-type continuous rotator** allows precise positioning of the grapple.
- **Safety:** a special holding valve provides a safe grip – even if pressure drops.

Hydraulic hook KM 920-5 in different versions including Kinshofer rotator for tools and loads with ring system.

- **Low overall height** due to compact design.
- **Precise positioning** in combination with KINSHOFER rotator.
- The **safety load hook** is equipped with a hydraulic cylinder for opening/closing without opening unintentionally in a loaded condition.
- Suitable for the hydraulic suspension of pallet forks with vertical crane hook suspension or with additional hook (version B) for the fast and precise load suspension with e.g. tightropes, lashing straps, etc. and the following release of the loads (version C w/o additional hook).
- Including **integrated locking indicator**.
- Versions B **with switch valve/CEJN Multi-X-couplings**: for the hydraulic suspension and operation of universal forks and other hydraulic attachments with vertical crane hook suspension; with additional load hook by default.
- All versions can also open and empty containers with only one suspension opening (measurements container flap see drawing below).

Hydraulic hook KM 920-4 for containers and loads with ring system

The hydraulic hook facilitates the fast and precise lifting and loosening of containers and loads with ring system.

- ▷ **Precise positioning** in combination with KINSHOFER rotator.
- ▷ **Low overall height** due to compact design.
- ▷ **Robust mechanics** with hydraulic cylinder (open/close).
- ▷ V-shaped cutout **facilitates ring suspension**.
- ▷ Rotator with vertical oil ducts, so **no open short hose** connections.

KINSHOFER container discharge attachments with ring system or the fast KINSHOFER mushroom system are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation.

Container discharge unit KM 920-1 with ring system / low overall height

- ▷ **Low overall height** due to compact design.
- ▷ **Extremely low maintenance and ecofriendly**, because no bearing has to be lubricated.
- ▷ **Hooks on automatically** when container is lifted.
- ▷ **Precise positioning** with KINSHOFER rotator.
- ▷ Protection against damage of container by **automatic lift stop**.
- ▷ Available with **two load capacities** (version A and B).

Container discharge unit KM 920-11 for containers with ring system

- **Robust mechanics** with few moving parts and guided lifting hook.
- **Precise positioning** with KINSHOFER rotator, due to the use of a rotator with vertical oil ducts no externally installed hydraulic hoses are necessary.
- Pressure relief valve ensures **independence of crane operating pressure**.
- Protection against damage of container by **automatic lift stop**.

Container discharge unit KM 921 for containers with KINSHOFER mushroom system or ring system

- **Combination model:** without any adjustments both types of containers can be handled – with KINSHOFER **mushroom system or ring system**.
- **Low overall height** due to compact design.
- **Robust mechanics** with self locking spindle.
- **Precise positioning** with KINSHOFER rotator.
- Pressure relief valve ensures **independence of crane operating pressure**.
- Protection against damage of container by **automatic lift stop and an additional height control system**.

The safe operation of the container discharge unit KM 921 can only be guaranteed by KINSHOFER GmbH if the containers are equipped with ORIGINAL KINSHOFER HOIST AND FIXED DISKS and the specified spacing dimensions are complied with!
Do not use fixed discs with locking ribs!

Container discharge unit KM 920-12 for containers with KINSHOFER mushroom system

- Robust mechanics with **self centring hydraulic interlocking**.
- **Precise positioning** with KINSHOFER rotator, direct hose routing.
- **Independence of crane operating pressure** due to the pressure relief valve.
- Protection against damage of container by **automatic lift stop and an additional height control system**.
- Pressure control for **user controlled unlocking**.
- Including **integrated locking indicator**.

Type	max. Lift of the hook (mm)	Load capacity (kg)	Height (incl. rotator) (mm)	Self weight* (kg)
KM 920-12	500	2500	1490	210

* incl. rotator & hoses / excl. upper suspension & pendulum damper

Package consists of: container discharge unit, rotator KM 04 F, short connecting hoses KM 203 01, upper suspension with pendulum damper KM 511 (4500), pressure relief valve and non-return valve

The safe operation of the container discharge unit KM 920-12 can only be guaranteed by KINSHOFER GmbH if the containers are equipped with ORIGINAL KINSHOFER HOIST AND FIXED DISKS and the specified spacing dimensions are complied with!
 Do not use fixed discs with locking ribs!

Requirements of truck crane

Operating pressure at oil flow:
 20 - 26 MPa (200 - 260 bar) at max. 75 l/min
 20 - 37 MPa (200 - 370 bar) at max. 40 l/min

The **KINSHOFER** container discharge unit with twin-hook for deposit containers with system Schäfer are characterised by short cycle times and an attractive acquisition price. Containers can be emptied even faster and more cost effectively with a one-man operation. The attachment is extremely maintenance low, robust and low-built thanks to its compact construction.

Container discharge unit KM 920-31 for containers with twin-hook system

- **Robust mechanics.**
- **Precise positioning** with KINSHOFER rotator, short hose connection.
- **Independence of crane operating pressure** due to the pressure relief valve.
- Easy handling thanks to **low overall height**.
- **Low maintenance.**

Type	Description	Tilting angle (deg.)	Self weight (kg)
KM 924	docking device for container discharge units: it allows the discharge unit to be hydraulically docked and locked onto the crane jib. When unlocked, acts as a hydraulic pendulum damper. A solenoid valve for switch-over between the hydraulic circuits is included. Please state crane model when ordering. Operating pressure max. 28 MPa (280 bar) .	90°	70

Dimensions for containers with KINSHOFER mushroom or ring system

mushroom system for containers

ring system for containers

mushroom and ring system: leverage hoisting max. 500 mm

Mushroom system at container
 Usage only for containers with mushroom system with dimensions as shown above that are equipped with „ORIGINAL KINSHOFER FIXED and HOIST DISCS“. (According to DIN EN 13071-3)

Ring system at container
 Usage only for containers with ring system with dimensions as shown above .
Hoist ring at container with max. lifting height 500 mm.

A hydraulically operated attachment used for positioning tubes or poles, the KM 930 is for use on loader cranes with three functions. Flange mounting on the mechanical extension of the crane.

- **Manoeuvrability** through three hydraulic functions gripping, lifting and turning (rotation and tilting) of straight round poles (three hydraulic circuits are necessary). Unlimited angle of rotation.
- **Heavy loads** of 500 kg up to 3000 kg can be handled by the KINSHOFER manipulators.
- **Precision operation** assured through continuous rotation, equipped with mechanically operating, hydraulic pilot controlled brake to prevent unintentional rotation.

The 3-axes-manipulator KM 931 features maximum manoeuvrability for your attachments at the loader crane's tip – and provides flexibility of the loader crane's use in any arc position.

- **3-Axes-manipulator: maneuverability** by three hydraulic functions: gripping, rotating and tilting (3rd hydraulic cycle needed).
- **Endless rotation.**
- **High loads** up to 1000 kg.
- **Precise positioning** guaranteed by self-locking worm drive (KM 931-1000).
- **5-line feedthrough.**
- Provides an **exchange system for the use with different attachments.**

The KM 932MB Barrier Lifter is a mechanical grapple for fast and convenient handling of concrete barriers and blocks.

- **Safe:** Carbide gripping pads ensure safe operation, even on wet or coated surfaces. An optical power indicator illustrates the range for optimum grip.
- **Efficient:** The fully integrated, mechanically operated "latch & release" system allows the unit to function independently, without assistance from a ground man.
- **Versatile:** Multi-position arms are a standard feature. This means one unit can achieve different gripping ranges by simply changing a pin position.
- **Cost-effective:** The elimination of slings and chains means more cycles can be achieved per hour.
- **Fast:** The "latch & release" system functions automatically each time the load line is slackened.

The robust earth drills for truck cranes up to 18 t/m are an economical and customized solution for earth drills e.g. for fencing, road signage, landscaping and tree planting. Well borings, screw pile installations and sound barrier installations are also no problem for the earth drills.

- **Non Dislodgement Shaft (NDS)** for more safety and lower down times, as this unique construction prevents the output shaft from dislodgement.
- Pre-filled with a **colored gear oil**. Not only is the use of a colored oil a good indicator of correct service, but it also aids identifying possible hydraulic oil leaks.
- The **heavy duty fabricated hoods feature forged steel ears**; these high strength ears easily transmit the high torsional loads, experienced whilst drilling, without becoming fatigued.
- **Easy access oil service points.**

The S4 auger is perfectly matched to the 3000TC earth drill and every task. A constant spiral configuration and a shallow pitch flight guarantee extreme efficiency and productivity. Suitable for truck cranes up to 9 t/m.

- **Higher productivity** by constant spiral configuration and the perfectly angled tooth holder.
- **Interchangeable pilots and teeth** allow for differing ground conditions.
- **Easy fitting of teeth and pilots.**
- **Patented Shock Lock-System:** incorporating a shock absorbing rubber element to protect the tungsten carbide on the tooth assembly coupled with a solid locking pin prevent tooth loss.
- High flexibility thanks to **different auger extensions.**
- **For earth drill 3000TC.**
